DETAILED ACTION

1. Claims 1-12 are pending in the application.

Drawings

2. Figures 5-6 should be designated by a legend such as "Prior Art" since only that which is known is illustrated.

Specification

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Allowable Subject Matter

4. Claims 1-12 are allowable over the prior art of record because the cited references do not contain the specified limitation of a serial data receiver comprising: a differential receiver configured to receive first and second signals of opposite phases to provide a differential signal of the first and second signals as received serial data; a clock generator configured to generate a clock signal; a tracking circuit configured to receive the received serial data and the clock signal to generate a synchronous clock signal based on the clock signal by tracking the received serial data, the

tracking circuit configured to generate a synchronous serial data synchronized with the synchronous clock signal; an idle detector configured to receive the first signal and the second signal, the idle detector configured to detect an idle period of the first and second signals to provide an idle signal; a memory configured to store the serial data in response to transitions in the synchronous clock signal, the memory configured to provide the stored data in response to transitions in the clock signal, the memory configured to stop storing based on a hold signal; and a data protector configured to receive the idle signal to generate the hold signal, the data protector configured to provide the hold signal for the memory.

Conclusion

5. This application is in condition for allowance except for the following formal matters: as mentioned above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
